Who makes the Bess battery?

Conducting the engineering and construction of the BESS is the multinational company, Equans Netherlands. Dutch energy player, Eneco, is tasked with tweaking the battery for optimal performance, enabling it to maintain the grid's balance without escalating local congestion.

Why is a Bess system important?

BESS plays a crucial role in optimizing energy use, enhancing grid reliability, and enabling the integration of renewable energy sources into the power grid by smoothing out fluctuations in energy production and consumption. Why is networking of the different components in a BESS system important?

How much power does a Bess have?

The system is built of two main blocks. The PCS building block, responsible for the main control of the mobile BESS. The nominal power rating of the PCS block is 225 kVA, with a maximum peak power in the peak shaving mode of 275 kW. The second block is the modular battery pack.

Do mobile Bess applications have communication interfaces?

This thesis project, carried out at Northvolt Systems, aims to analyze the existing and readily used communication interfaces for a specific set of mobile BESS applications. The analysis is performed by a literature review of typical mobile BESS applications with the identified corresponding communication interfaces.

On 7 April 2025, over 50 energy professionals, including financiers, developers and technical consultants, gathered at Dentons' Amsterdam office for an evening dedicated to the future ...

Combine devices from different industries and take advantage of proven components, closing the communication gap between building, energy, industry and automotive protocols in your BESS.

Dispatch Grid Services, the Amsterdam-based battery storage solutions company, has started construction of the previously announced ...

The compact power blocks allow the connection of power cables at input or output of BESS sub-systems control panels such as PCS, central and solar inverters. They combine high ...
