Will Turkey quadruple wind and solar power capacity by 2035?

The government aims to quadruple wind and solar power capacity to 120 GW by 2035. There are new rules for the upcoming round of YEKA auctions including a 20-year fixed price. Minister of Energy and Natural Resources Alparslan Bayraktar said Turkey is facilitating an investment cycle of USD 80 billion by 2035 in renewable energy production.

Is Turkey a good place for solar energy?

Given Turkey's advantageous geographical positioning for solar energy and the high solar radiation potential of its Eastern Mediterranean region (Yildirim et al., 2018), this synergy between hydropower and floating solar becomes particularly relevant for maximising renewable energy generation.

Could Turkey's hydroelectric infrastructure complement solar generation?

Turkey's extensive hydroelectric infrastructure could potentially complement solar generation, with hydro resources providing balancing services during nighttime and low solar radiation (Ates, 2022, Kulat et al., 2023).

Does Turkey have pumped energy storage facilities?

While Turkey has significant hydropower capacity, it currently lacks operational pumped storage facilities (Haktanir et al., 2021), despite having the highest potential for pumped storage in Europe (Barbaros et al., 2021), leaving its energy storage infrastructure limited relative to its renewable energy growth.

If so, you may have come across 250-watt solar panels in your research. 250W panels are seen as the entry point for solar power, but most new residential solar systems use panels well above 250 watts. ...

Within the framework of this plan, wind and solar energy are expected to account for more than 90% of the installed capacity of non-hydro renewable energy sources.

This paper considers the complementary capacity planning of a wind-solar-thermal-storage hybrid power generation system under the coupling of electricity and carbon cost markets.

With this monumental project, which will strengthen Türkiye's energy independence and support its green transformation, we remain committed to building a cleaner and more sustainable future. ...

Projects are underway for solar power plants with a total capacity of 43.5 GW and 26.1 GW in wind farms, the ministry said. Breaking down the total 69.6 GW, it added that facilities of 33.9 ...

Projects are underway for solar power plants with a total capacity of 43.5 GW and 26.1 GW in wind farms, the ministry said. Breaking down the total ...

Türkiye ratified the Paris Agreement in 2021 and declared its intention to achieve the "net zero" target by 2053. The government announced a target of an increase of 1 gigawatt in solar photovoltaic and ...

With this monumental project, which will strengthen Türkiye's energy independence and support its green transformation, we remain committed to building a cleaner and more sustainable future. ...
