The Serbian Government has approved the development of a spatial plan for constructing large-capacity self-balancing solar power plants paired with battery energy storage ...

Located throughout the country, these solar power plants will help Serbia improve energy security, avoid expensive energy imports, and achieve electricity independence at an affordable price.

The resulting study is a map overlaying solar development potential with impact potential, as well as a selection of the 100 best sites for solar ...

The resulting study is a map overlaying solar development potential with impact potential, as well as a selection of the 100 best sites for solar development according to both criteria, with an ...

Through a case study that includes a producer-consumer household, experiences of using photovoltaic solar energy system in Serbia will be discussed, including the economic viability ...

This paper describes the case of a typical residential new construction in Belgrade that has applied the prescribed solutions and became the first building that has obtained the building permit ...

Serbia has launched its ambitious 2025 Solar Initiative, aiming to install 300,000 solar panels on rooftops nationwide by the end of the year. This marks a significant push to increase the ...

The workshop focused on the regulatory and legal challenges and opportunities with regard to scaling-up distributed solar PV systems in Serbia, with a particular focus on self-consumption.
