-----

Push the third battery cabinet into position, align with the seismic anchoring (if any), level the battery cabinet, and interconnect with the other battery cabinets as described in step 2, step 3, and step 5.

Do not disconnect the battery connectors under load under any circumstances. Battery replacement and external battery cabinet installation shall be handled by qualified SERVICE PERSONNEL only. ...

The option provides functional access to the equipment circuit breaker via a handle located on the exterior of a cabinet door that is physically connected to the circuit breaker in the cabinet's interior.

The battery must be installed by qualified personnel in accordance with the latest edition of the National Electrical Code ANSI/NFPA 70 and/or Canadian Electrical Code, Part I, CSA C22.1.

Connect the DC+ and DC- cables to the DC+ and DC- terminals. Connect the power cables in the UPS. If more battery cabinets are part of the solution, connect all battery cabinets to the UPS according to ...

Battery cabinets that are not supplied with an incorporated DC output disconnect device must have an appropriate disconnect device provided external to the cabinet.

The term line-up-and-match refers to battery cabinets that are physically attached to the UPS, share internal wiring, and use the battery cabinet breaker as the battery isolation device.

Connect the battery cable accessory to one end of the battery port on the rear panel of the UPS and connect the other end to any battery port on the rear panel of the EBC.
