Do you need a pass-through box for solar panels?

A pass-through box is typically used in smaller solar PV systems. If you only have one or two strings of solar panels (a "string" is a series of panels wired together), then you don't need anything too fancy. The pass-through box provides a convenient and safe spot to wire the wires coming from your solar array. What is a Combiner Box?

How do I use a pass-through box on a solar array?

If you're only passing through one or two strings from your solar array, here's what you do: Mount the pass-through box securely: Your box should be rated for outdoor conditions--NEMA 3 or NEMA 4 if it's outside. Run your solar PV wire into the box: Use appropriately sized holes and strain relief connectors to protect the wires where they enter.

How do you wire a solar PV system?

Run your solar PV wire into the box: Use appropriately sized holes and strain relief connectors to protect the wires where they enter. Make your wire wires: You'll need to connect the positive and negative wires coming in from the array. These will either be connected using wire nuts or terminal blocks.
