Remote community energy systems in Canada are undergoing supply and load technology-based interventions to support decarbonization efforts. As wind and solar electricity ...

The community is now operating a smart microgrid system and is interested in finding additional, innovative ways to improve the efficiency of the generation ...

The demonstration project has the potential for use in other off-grid diesel-powered communities, reducing their fossil fuel use and resulting in lower greenhouse gas emissions, improved air quality ...

Improve access to funding and provide support for clean energy initiatives in Indigenous, rural and remote communities across Canada.

The community is now operating a smart microgrid system and is interested in finding additional, innovative ways to improve the efficiency of the generation system that will in turn reduce the ...

This project demonstrates the benefit of microgrids for powering remote communities. Eaton's expertise can be applied to grid-connected communities, businesses and institutions to support more resilient, ...

In building a microgrid, the first step is to understand what are the energy requirements within the community. The planner must make sure to understand what the load curve and the peak looks like, ...

Hitachi ABB Power Grids collaborated closely with ATCO and 3NE to understand the unique needs of the community and the long-term intent of the project to maximize both energy output and reduce ...
