As the UK's energy system continues its green transformation, energy storage systems will be critical to ensuring energy security and ...

VRE's share in Great Britain is restricted due to power system constraints. Large amounts of biomass are required for biohydrogen production. There is significant potential for hydrogen ...

A large increase in the UK's energy storage will be critical to ensuring the UK reaches its goal of a clean power system by 2030, with a tenth of generated wind power currently wasted, ...

Having substantial grid-scale energy storage could help stabilise electricity prices, which might give households lower and less volatile bills. It ...

The UK's journey to net zero will be impossible without large-scale energy storage. As renewables like wind and solar become dominant sources of electricity, ...

The UK's journey to net zero will be impossible without large-scale energy storage. As renewables like wind and solar become dominant sources of electricity, storing excess power and deploying it when ...

This post investigates the state of the UK battery storage pipeline, year-to-date figures and an insight into the appetite to develop over time. Battery storage is essential for providing the ...

Having substantial grid-scale energy storage could help stabilise electricity prices, which might give households lower and less volatile bills. It would also reduce the need to fire up gas ...
