What is a bi-directional DC-DC optimizer for storage systems?

Alencon's Bi-Directional DC-DC Optimizer for Storage Systems, the BOSS, is a unique solution for incorporating Solar and Storage using either AC or DC Coupled topologies. The BOSS enables the granular control of charge and discharge of individual battery racks or entire BESS containers with a patented, galvanically isolated approach.

Can a 'isolated bidirectional DC-DC power supply' be used for high-power conversion?

This article introduces a reference design for an 'isolated bidirectional DC-DC power supply' that can be used as the basis for high-power conversion applications, including EV charging stations and inverters in solar power generators.

What is bidirectional charging?

Bidirectional charging, on the other hand, allows electricity to flow both ways. This means your EV can receive energy when charging and send energy back to your home or the grid when needed. The Sigen EV DC Charging Module supports this two-way interaction, transforming your electric car into an active player in your household energy system.

What is a bi-directional Converter?

AC/DC topologies Bi-directional converters use the same power stage to transfer power in either directions in a power system. Helps reduce peak demand tariff. Reduces load transients. V2G needs "Bi-Directional" Power Flow. Ability to change direction of power transfer quickly. High efficiency >97% (End to End) at power levels up to 22KW.

Applications of Bi-Directional Converters What is a Bi-Directional Converter Bi-directional converters use the same power stage to transfer power in either directions in a power system.

Connected directly to your home solar panels and energy storage system, it ensures your EV is charged with clean, renewable power whenever available. This DC-coupled architecture ...

This product is perhaps more commonly called a 'solar battery box' but is also referred to as a 'pole mount battery box'. Some battery boxes are large enough to be considered battery cabinets and are ...

The BLOC is a bidirectional, non-isolated DC:DC converter designed to manage power flow between a

variety of high-voltage DC sources and loads such as PV arrays, batteries, fuel cells, and EV ...

Charge the battery during off-peak windows and discharge during peaks to shave the kW spikes that drive utility bills. Built-in logic supports peak-valley arbitrage and smart power regulation, ...

Seamlessly integrates grid-connected and off-grid modes, with bidirectional ACDC and DCDC modules. Ideal for microgrids, UPS, and load shifting. The system seamlessly integrates both grid-connected ...

This product is perhaps more commonly called a "solar battery box" but is also referred to as a "pole mount battery box". Some battery boxes are large enough ...

Depending on the desired performance of the battery energy storage system, the BOSS can individually charge or discharge each battery rack, ensuring optimal system efficiency.
