What is the energy storage strategy & roadmap (SRM)?

WASHINGTON, D.C. - The U.S. Department of Energy (DOE) today released its draft Energy Storage Strategy and Roadmap (SRM), a plan that provides strategic direction and identifies key opportunities to optimize DOE's investment in future planning of energy storage research, development, demonstration, and deployment projects.

Does the energy storage strategic plan address new policy actions?

This SRM does not address new policy actions, nor does it specify budgets and resources for future activities. This Energy Storage SRM responds to the Energy Storage Strategic Plan periodic update requirement of the Better Energy Storage Technology (BEST) section of the Energy Policy Act of 2020 (42 U.S.C. § 17232 (b) (5)).

What is energy storage control?

Robust operational data shared through standardized metrics and testing inform planning, operations, and maintenance decision making. Energy storage control systems support multiple-use applications and interoperability with utility systems to support predictable, reliable, and flexible operations.

What is DOE's strategic investment in energy storage?

DOE's strategic investment in energy storage aims to ensure that all Americans have access to energy storage innovations to enable resilient, reliable, secure, and affordable electricity systems and supplies.

In December 2020, DOE released the ESGC Roadmap, the Department's first comprehensive energy storage strategy to develop and domestically manufacture energy storage technologies ...

To fill such gap, this paper focuses on the optimal planning of various ESTs considering thirteen demand scenarios in electricity grid through establishing a three stage ...

In this report, our lawyers outline key developments and emerging trends that will shape the energy storage market in 2025 and beyond.

Electricity storage technologies (including battery storage) allow surplus electricity to be stored as other forms of energy until it is required, when it can be re-released as electricity.

To fill such gap, this paper focuses on the optimal planning of various ESTs considering thirteen demand
