The EU's battery energy storage fleet has grown for the 12th consecutive year, marking yet another record year for new installations. According to a new report from SolarPower Europe (SPE), ...

Europe's ambition to become a global hub for energy storage system (ESS) manufacturing is facing a sobering reality check.

The EU's battery energy storage fleet has grown for the 12th consecutive year, marking yet another record year for new installations. According to a new report from ...

Executive summary Batteries are an essential part of the global energy system today and the fastest growing energy technology on the market Battery storage ...

The EU installed 27.1 GWh of new battery storage capacity in 2025, a new record year powered by strong utility-scale deployment, according to SolarPower Europe.

If the EU is serious about energy security and industrial leadership, battery deployment and manufacturing must advance hand in hand. Recognising the critical role of BESS in decarbonising ...

Our five-year outlook foresees significant BESS expansion in Europe - a sixfold increase to nearly 120 GWh by 2029, driving total capacity to 400 GWh, yet falls short of energy transition needs.

In 2025, European Union member states installed 27.1 GWh of new battery energy storage capacity--a 45% increase over 2024--marking the twelfth consecutive year of record ...
