Over the last five years the Cook Islands have made huge strides to reach its national electricity target of 50% of islands converted to renewable energy sources by 2015, with the remaining ...

In its approach to delivering a 100% renewable energy target across 12 islands by 2020, the Cook Islands presents a rare insight into how planning requirements of high penetration renewable island ...

The renewable energy offered by hybrid systems is also typically aligned with priorities for funding agencies that may be relied upon to support the electrification of outer islands.

New South Wales-based renewables company MPower is set to build its largest energy storage project to date, after securing the contract to design and install a 5.6MWh battery system in Rarotonga, the ...

The global solar storage container market is experiencing explosive growth, with demand increasing by over 200% in the past two years. Pre-fabricated containerized solutions now account for ...

This Plan updates the Te Atamoa o te Uira Natura (The Cook Islands Renewable Electricity Chart (CIREC), 2012) and is a guiding document for all stakeholders. The Implementation Plan is ...

In the heart of the South Pacific, the Cook Islands face unique energy challenges. This article explores how photovoltaic power generation and advanced energy storage systems are transforming the ...

That's the reality for many in the Cook Islands, where imported fossil fuels power 90% of electricity generation. But here's the game-changer: photovoltaic (PV) systems with energy storage can slash ...
