Are energy storage and energy generation projects approved in the UK?

In much of the UK, energy storage and energy generation projects under 50 MW can be approved by a standard local planning process, while projects above 50 MW are classified as Nationally Significant Infrastructure Projects (NSIPs) and require a more complex consent process.

Does Highland Council have a renewable & low-carbon project?

Highland Council already has a number of other renewable and low-carbon projects. They include Hydro Ness, which generates electricity from the River Ness at Inverness using an Archimedes Screw. It also has plans for an air source heat pump system to warm Inverness Castle and neighbouring properties.

What is going on in the Highlands?

The Highlands are dominated by wind farms and hydroelectric schemes, with proposed BESS projects set to add to additional sustainable infrastructure to the region. Three main projects from developers are under consideration, with the authority submitting notifications of its plans to its North Planning Applications Committee:

How does Inverness generate electricity?

They include Hydro Ness, which generates electricity from the River Ness at Inverness using an Archimedes Screw. It also has plans for an air source heat pump system to warm Inverness Castle and neighbouring properties. The local authority had originally hoped to do this by capturing heat from waste water flowing through a nearby sewer.

The Highland Council, a local government body in northern Scotland that includes the famous Highlands region, is considering several new large-scale battery energy storage systems ...

The BESS will connect to the utility lines on Cedar Lane and provide power to the nearby Dean Substation. The batteries will provide backup power during peak demand for up to approximately ...

Highland Council is exploring the potential of generating and storing its own power. The local authority believes solar and battery storage could bring widespread benefits to communities, ...

Imagine a remote village nestled in the Himalayas or a mining site in the Andes - places where traditional power grids can't reach. That's where highland energy storage devices shine. These ...
