How much does the energy storage system cost?

The energy storage system is a 4MW,32MWh NaS battery consisting of 80 modules,each weighing 3 600 kg. The total cost of the battery system was USD 25 millionand included USD 10 million for construction of the building to house the batteries (built by Burns &McDonnell) and the new substation at Alamito Creek.

Do investors underestimate the value of energy storage?

While energy storage is already being deployed to support grids across major power markets,new McKinsey analysis suggests investors often underestimate the value of energy storage in their business cases.

Should energy storage be undervalued?

The revenue potential of energy storage is often undervalued. Investors could adjust their evaluation approach to get a true estimate--improving profitability and supporting sustainability goals.

How do I evaluate potential revenue streams from energy storage assets?

Evaluating potential revenue streams from flexible assets, such as energy storage systems, is not simple. Investors need to consider the various value pools available to a storage asset, including wholesale, grid services, and capacity markets, as well as the inherent volatility of the prices of each (see sidebar, "Glossary").

Energy storage power stations generate substantial revenue through various avenues, including participation in ancillary services, capacity markets, and energy arbitrage.
