What are the benefits of a hybrid energy system in Ireland?

Hybrids have the potential to reduce the need for offshore grid investments, reducing total system costs and environmental impact. At the same time, it facilitates Ireland's integration with neighbouring countries and thereby supports security of supply and addressing oversupply concerns.

Will Ireland allow private solar companies to set up their own electricity?

Image: Connie Zhou via Wikimedia Commons CC-BY-SA-4.0 Solar Ireland, the lobby group representing the Irish solar industry has welcomed the State's approval for a new policy that will allow private sector companies to set up their own private electricity infrastructure.

What are Ireland's New electricity interconnection plans?

The proposed plans will see Ireland increase its electricity interconnection capacity and explore new interconnection opportunities with Spain, Belgium and the Netherlands as well as further connections to both Great Britain and France.

What is Ireland's Electricity interconnection capacity in 2023?

National Policy Statement on Electricity Interconnection 2023 Ireland's interconnection capacity currently stands at 500 MW via a single connection to the UK market. Capacity is set to more than treble by 2027, to 1,700 MW, which will include a return of direct interconnection between Ireland and the EU via the 'Celtic Interconnector'.

A hybrid connection is where more than one source of energy or storage is connected to the national grid on a single site. These are currently not permitted in Ireland, meaning that in sites ...
