An IP55 rating indicates that a device is protected against dust and other solid particles. The first digit of the rating (5) indicates that the device is protected against dust, but not completely.

While IP55 enclosures resist water jets effectively, they are not designed for immersion or heavy washdown applications--for those conditions, IP66 or higher ratings are recommended.

Explore the meaning of IP55, IP56, and IP65 motor ratings. Learn how ABB NEMA motor enclosures protect against dust, water, and harsh industrial conditions.

A detailed comparison of IP51, IP53, IP54, and IP55 ratings, explaining their protection levels against dust and liquids for electrical enclosures.

What does IP55 mean? IP55 means that the product is protected against quantity of dust that could interfere with the normal operation of the product but is not fully dust tight.

What is an IP55 Rating and Why is it Important? Many everyday products like your phone, outdoor gear, and electronic devices are designed and tested for durability and resistance to ...

IP55 is suitable for areas where complete dust protection is not needed and water exposure is limited to light showers or splashes. IP55-rated devices are sufficient for many indoor, or ...

IP55 stands for "Ingress Protection55", and it indicates that a phone has been tested against dust and water for up to 55 minutes at a pressure of one atmosphere (or about 10 ...
