Lithium-ion batteries are increasingly being used to store power for electrical grids, but some localities are concerned about fire risks.

Battery energy storage systems (BESS) are growing rapidly on the U.S. grid, but the technology has faced some headwinds. The primary technology being installed, lithium-ion storage ...

But the fire is raising questions in other California communities about big battery storage facilities with residents in at least four counties opposing new plants.

But this vision for a battery boom has met increasing opposition from residents who don't want energy storage facilities in their city or town. Oakham is one example. This quiet, rural town...

Energy storage projects are facing increasing scrutiny from local residents in parts of the U.S. Residents have voiced concerns about fires at energy storage facilities - in particular, lithium ...

Energy storage projects are facing increasing scrutiny from local residents in parts of the U.S. Residents have voiced concerns about fires at energy storage facilities - in ...

Sites like Moss Landing are essential for storing up wind and solar power and discharging it when power is needed most. But lawmakers and regulators are increasingly worried about whether ...

But as more energy storage is added, residents in some places are pushing back due to fears that the systems will go up in flames, as a massive facility in California did earlier this year.
