Who Cares About Energy Storage? (Spoiler: Everyone) It's 3 AM in Lome, Togo. A hospital's diesel generator sputters during emergency surgery. Meanwhile, 16km away, the Lome ...

This article explores its technological innovations, market impact, and how solar solutions like this are reshaping energy access in Togo and neighboring regions.

Zambia has kicked off construction works on the first phase of a 100-MW solar project, also featuring battery storage, in Choma District, as it seeks to add 1,000 MW of new power capacity to the national ...

Solar power can be used to create new fuels that can be combusted (burned) or consumed to provide energy, effectively storing the solar energy in the chemical bonds.

With global renewable energy capacity projected to grow by 60% by 2030 (IRENA 2023), efficient storage solutions like Lome's lithium battery systems have become critical infrastructure. These ...

Solar power can be used to create new fuels that can be combusted (burned) or consumed to provide energy, effectively storing the solar energy in the chemical ...

You know, when we talk about renewable energy in Africa, most people immediately think of solar farms in the Sahara or wind projects in Kenya. But here's the thing - the Lome photovoltaic energy storage ...

Long duration energy storage (LDES) generally refers to any form of technology that can store energy for multiple hours, days, even weeks or months, and then provide that energy when and if needed.
