What is electrical systems maintenance in a data center?

Electrical systems maintenance in a data center involves the inspection, cleaning, and servicing of key components. This ensures an uninterrupted, stable, and efficient power supply to the facility.

Are lithium batteries a good choice for data center batteries?

With the development and improvement of battery technology, lithium batteries have gradually become one of the choices in the future. This article will provide a detailed introduction to the characteristics and maintenance of data center batteries.

What components need regular maintenance in a data center?

The main components requiring regular maintenance include Uninterruptible Power Supply (UPS) systems, Power Distribution Units (PDUs), backup generators, transformers, switchgear, and switchboards. Static UPS Systems: These systems use batteries and capacitors to sustain a data center's operations for a brief period during a power outage.

Does SCU provide an UPS system for the Indonesian data center?

SCU provides a UPS system for the Indonesian data center, with CMS 300 specifications. Each UPS system is equipped with two 480v 80ah lithium-ion batteries to build a powerful energy storage system that can provide users with about 15 minutes of power time to store data.

This customized solution not only fully considers the data center's power needs but also improves the operating efficiency of the entire system, ensuring that the data center ...
