How does tariff risk affect a battery energy storage system (BESS) project?

Mitigating tariff risk in battery energy storage system (BESS) projects is crucial for ensuring project financial viability, as tariff changes can significantly affect cost structures and overall project economics.

How will Biden's new tariff structure affect the energy storage industry?

The Biden administration's announcement marks a significant shift in the tariff framework for the energy storage industry. Under the new structure, the Section 301 tariff rate on lithium-ion non-EV batteries imported from China will increase from the current 7.5% to 25%, effective January 1, 2026.

Will US tariffs affect energy storage?

There have also been indications that the US administration may consider other tariff proposals impacting energy storage, such as a 10-20% universal tariff, tariffs of up to 60% across the board on Chinese-origin goods, and tariffs of 25% on Mexican and Canadian origin goods.

Should tariffs be used as regulatory control?

With respect to energy storage development--and particularly, the supply of batteries and components--which were a priority over both the Trump-Pence and the Biden administrations, it seems more likely that tariffs would be utilized as regulatory control rather than a negotiating tactic.

In your letter dated September 25, 2023, you requested a tariff classification ruling. The item under consideration is referred to as a Battery Energy Storage System.

Tariffs on imported lithium-ion batteries and inverters increase the overall cost of residential energy storage systems. This affects the affordability and payback period for homeowners ...

Navigating international trade requires precise classification of goods - and energy storage systems are no exception. The energy storage product tariff code (often called HS codes) ...
