Are energy incumbents entering a new energy space?

Electrification and renewables, in particular, show accelerated growth, with electric power and hydrogen expected to represent 32 percent of the global energy mix by 2035 and 50 percent by 2050 (Exhibit 1). It's hardly surprising that energy incumbents are entering this new energy space.

Should incumbents choose the operating model for a new energy business?

New energy businesses have the potential to thrive, and many incumbents are eager to enter this high-growth space. The operating model that energy players choose can directly impact the success of their new business, and incumbents need to decide what strategy would best suit their business needs.

Why should energy players choose a new operating model?

The operating model that energy players choose can directly impact the success of their new business, and incumbents need to decide what strategy would best suit their business needs. This decision is only the beginning, but it can pave the way for future success.

Once a renewable energy project transitions from development to operation, key players come into focus to ensure its ongoing success. The primary entities involved in this phase include ...

Building up generation means more energy for the grid and more opportunities for people to power their futures. The construction, maintenance, and operation of new energy ...

Federal policies from 2005 to 2022 have and continue to shape renewable energy siting on public lands, even amid regulatory hurdles and political shifts. The 2024 Right-of-Way ...

Facility owners seeking to reduce their operating costs, lower greenhouse gas emissions, and build resiliency at their facilities can benefit from installing on-site renewable energy generation and on-site ...

Building up generation means more energy for the grid and more opportunities for people to power their futures. The construction, maintenance, and operation of new energy facilities ...

In this paper, the dynamic characteristics and regulation strategy of the source load storage to optimize the operation of multi-energy complementary systems in an oilfield well site are ...

New transmission line connecting Hydro-Quebec to ISO-NE begins commercial operations Petroleum

electricity generation surpassed natural gas in New England during winter storm

DOE has identified 16 potential sites uniquely positioned for rapid data center construction, including in-place energy infrastructure with the ability to fast-track permitting for ...
