What is a DC power system?

A complete DC power system with distributed power output and battery backup all included in one unit. Two types available: Type 1 which combines DC power and batteries into a single cabinet, and Type 2 where batteries are separate (for larger systems). Primary DC output voltages in 24V, 48V, 125V, or 240V classifications.

What is intelligent AC/DC power distribution box?

The intelligent AC/DC power distribution box is a distribution automation measurement and control terminal applied to line distribution transformers. It has the functions of monitoring the low-voltage side load and frequency of the distribution transformer, collecting power, and controlling the switching of capacitors.

What is AC/DC power rectification?

AC/DC power rectification using modular SMRs offers redundancy and expandability. Integrated DC distribution eliminates the need for a separate distribution panel. Battery charging with battery circuit breaker included. Provides complete DC uninterruptible power supply (UPS) functionality.

What is a floor-mounted power system?

Designed as a floor-mounted cabinet solution, the power system boasts true redundancy, a state-of-the-art controller with monitoring and alarms, as well as NERC compliance capabilities. A complete DC power system with distributed power output and battery backup all included in one unit.
