What is the difference between a solar PPA and a lease?

Similar to a solar PPA, a solar lease scenario also involves a third-party owner and can often be structured with no upfront cost. The primary difference between a PPA and a lease is that rather than pay per kWh used as you would in a solar PPA, you'll pay a fixed rate over the lifetime of the contract (typically 7-25 years).

How much does a wind or solar PPA cost?

In the absence of a government subsidy, a wind or solar PPA provides that assurance. Vocabulary Tip: Third-party lenders can be banks, lenders, credit providers or finance providers. A typical European 100-megawatt (MW) wind farm can cost between EUR 1-2 million per MW to build.

Does a PPA lower your energy bills?

A PPA does lower your energy bills at the beginning of the agreement, but overtime that may not be the case. When you have a PPA with an escalator, the rate can become higher over time creating a scenario where one is locked into a 20-25 year agreement in which near the end, the homeowner is paying higher rates than what the utility charges.

Solar power generated remotely is purchased through virtual or synthetic power purchase agreements, through community solar projects, or directly from a utility. This Design Guide focuses on developing ...
