You can damage the charge controllers if they're connected to the panels with no battery voltage. Re-connect the batteries first before connecting the panels. The charge controllers want to ...

The issue often lies within one of four key areas: the solar array, the charge controller, the battery itself, or the overall system configuration. A systematic check of these ...

Explore what happens to solar power when batteries are full in our comprehensive guide. Learn about energy optimization, overflow solutions, and more.

If your solar battery isn't charging, check to ensure that the solar panels are receiving sunlight and are not obstructed by debris or shading. Inspect the wiring and connections between the ...

This is an all-encompassing post about what solar battery charging entails, how it works, the problems you're likely to experience, and what to do about them.

This is an all-encompassing post about what solar battery charging entails, how it works, the problems you're likely to experience, and what to do ...

Your inverter stays in battery charging mode because of faulty settings, low battery voltage, or excessive power draw. This isn't always normal--but solutions exist.

No matter how long i leave it in full sunlight over the course of a week, its always bulk charging. After charging, the battery voltage will settle at 13.33 volts.
