---

I just modded an Apex Nano 194BHS to prepare for converting to lithium. I tried the Renogy DCC30S as it combines the MPPT solar charge controller with a DC-DC converter/charger.

Cable sizing from the battery cabinet to the remainder of the ESS is dependent on multiple factors including the system maximum current draw, distance between the battery cabinet and ESS, ...

First, check the battery voltage. It must be in the advised range. It could be essential to use an external charger to charge the battery if the voltage ...

Your battery/batteries are likely damaged from being undercharged if this is the case. Even if there's no permanent damage, 12.4 volts is still a pretty discharged battery, if that reading is completely ...

In conclusion, our Solar Battery Cabinets are equipped with advanced features to handle low - voltage situations effectively. From voltage monitoring and smart charging to over - charging ...

If you are measuring 13.5 or 13.6 V at the battery, either the solar panels ARE charging it, or you are plugged into shore power and the converter is charging it, or both.

The purpose of this guide is to verify solar panel output and charging margin in Opti solar installations using voltage-based measurements. These tests help determine whether the solar array is ...

The PWRcell Battery is designed to house compatible lithium ion battery modules, and connects directly to the PWRcell Inverter and other REbus™ compatible components of the PWRcell system.
