---

Facilitated with IoT and mechanism design, participants are aware of external information and can adjust their behavior to realize "load following generation".

The mul-titype storage coordination mode, including battery storage, pumped storage, and electric vehicles, was formulated, and a collaborative optimal scheduling system architecture of source-grid ...

This paper proposes a three-layer coordinated planning model for Source-Grid-Load-Storage (SGLS) systems, considering electricity-carbon coupling and flexibility ...

The emerging and co-existing of diverse forms of the network including wide-area network, active distribution network, and micro-grids brings great challenges to the control and operation of ...

This paper proposes a three-layer coordinated planning model for Source-Grid-Load-Storage (SGLS) systems, considering electricity-carbon ...

The results indicate that the scheduling model designed for large-scale power systems can flexibly and efficiently integrate source-grid-load ...

The emerging and co-existing of diverse forms of the network including wide-area network, active distribution network, and micro-grids brings ...

With the rapid development of renewable energy technologies, the proportion of renewables in the power system is increasing. The traditional grid dispatch mode.
