Could Uruguay's energy model be replicated in countries with higher demand?

Other concerns focus on cost and scalability. While Uruguay's approach has delivered low prices, some energy analysts worry that replicating the model in countries with higher demand could require costly improvements to transmission infrastructure and significantly more storage.

Is Uruguay a net importer of energy?

Once a net importer of energy, Uruguay now exports its surplus energy to neighbouring Brazil and Argentina. In less than two decades, Uruguay broke free of its dependence on oil imports and carbon emitting power generation, transitioning to renewable energy that is owned by the state but with infrastructure paid for by private investment.

Did Uruguay build a power grid?

Uruguay did what most nations still call impossible: it built a power grid that runs almost entirely on renewables--at half the cost of fossil fuels. The physicist who led that transformation says the same playbook could work anywhere--if governments have the courage to change the rules.

How much green energy does Uruguay use?

In 2016, even before several more renewables projects went online, it hit 94.5 percent green energy. In 2019, according to an analysis by the Uruguayan company SEG Engineering, the country ran on 98 percent renewable energy.

A 2019 report by the International Renewable Energy Agency described Uruguay's geographical and temporal characteristics as making solar and wind highly complementary: solar power generation ...

While BESS costs in Uruguay range widely, strategic planning can unlock significant savings. Whether you're a farm, factory, or homeowner, integrating storage with renewables is no longer optional--it's ...
